## YALE DIABETES RESEARCH CENTER ANNOUNCEMENT PILOT AND FEASIBILITY PROJECT GRANTS 2017

The Yale Diabetes Research Center is pleased to announce the availability of pilot and feasibility project grants commencing February 1, 2017 for one year to fund collaborative research projects in the amount of ~\$35,000. These pilots provide seed money for investigators to explore the feasibility of **diabetes-related** studies and to obtain sufficient data to further pursue such lines of investigation via other funding mechanisms. The DRC Pilot and Feasibility program has been specifically designed to foster the work of young investigators beginning a career in diabetes research and new collaborative associations that involve the participation of investigators from more than one department.

Those eligible to apply fall into three categories: 1) New investigators without current or past non-mentored NIH research project support as a principal investigator, 2) Established investigators with no previous work in diabetes related areas who wish to apply their expertise to a problem in this area, and 3) Established investigators in diabetes research who propose testing innovative ideas that represent a clear departure from ongoing research interests. All eligible investigators must have faculty appointments and be independent investigators. Priority will be given to new collaborative investigations.

The **deadline to submit an application is November 16, 2017.** Dr. Kevan Herold, Director of the DRC Pilot and Feasibility program, will make announcement of recipients. Information about the program and the application forms are available on the Yale DRC website, [derc.yale.edu/pilot/](http://derc.yale.edu/pilot/) If you have any questions, please contact Kathleen Marcucio at 203-737-5071 or [Kathleen.marcucio@yale.edu](mailto:Kathleen.marcucio@yale.edu)
